

Enrollment System - Installation Manual

System Name: enrollment_system

1. Download the Project

Download the ZIP file from:

https://github.com/halimeow16/enrollment_system

Or clone the repository using Git:

git clone https://github.com/halimeow16/enrollment_system.git

2. Requirements

- Node.js
- Composer
- XAMPP
- PHP 8.3 or higher

3. Configure PHP Extensions in XAMPP

Before installing dependencies, open the php.ini file from your XAMPP PHP directory (for example: C:\xampp\php\php.ini).

1. Search for "extension=zip". If it is commented as ";extension=zip", remove the semicolon (;).
2. If "extension=zip" does not exist, add it manually.
4. Save the file and restart Apache if necessary.

4. Install Project Dependencies

Open Command Prompt (CMD) and navigate to the project folder:

```
cd path\to\enrollment_system
```

Run the following commands one by one:

- composer install
- npm install
- npm run build
- copy .env.example .env
- php artisan key:generate
- php artisan storage:link

5. Configure the Environment File

Open the .env file and review the database configuration settings. If your MySQL database uses a password, update the DB_PASSWORD value accordingly. If there is no password configured, leave the default value as it is.

6. Start XAMPP Services

Open the XAMPP Control Panel and start the following services:

- Apache
- MySQL

7. Create Database Tables and Seed Data

After Apache and MySQL are running, execute the following command:

```
php artisan migrate:fresh --seed
```

Included Utility

The project includes a `start_server` shortcut that automatically starts the Laravel application server, eliminating the need to manually execute `php artisan serve` from the command line. This is recommended for first-time users and non-technical staff.

8. Run the Application

After the installation and database setup are complete:

1. Locate the `start_server` shortcut included with the project.
2. Double-click `start_server`.
3. Wait for the server window to open and initialize the application.
4. Open your web browser and visit:

<http://127.0.0.1:8000/office> for admin side.

<http://127.0.0.1:8000/enrollment> for enrollments

5. The Enrollment System login page should now be accessible.

Note: Ensure that Apache and MySQL are running in XAMPP before launching the application.

Troubleshooting

- Ensure PHP 8.3+ is installed and active in XAMPP.
- Verify that the ZIP and MySQL extensions are enabled.
- Confirm that Apache and MySQL services are running.
- Recheck database credentials in the `.env` file if migration fails.
- Run `composer install` again if vendor dependencies are missing.
